Professional Summary

Full Stack Software Engineer with **1.5+ years of experience** building scalable web applications and backend systems. Worked as a **Software Application Developer Apprenticeship at Google**, shipping AI-powered search features to **500M+ monthly users**. Experienced in managing the end-to-end product lifecycle, bridging complex backend data with functional frontend interfaces. Driven by a deep understanding of the **Software Development Lifecycle (SDLC)**, with a focus on performance, scalability, and **user-centric engineering**.

Technical Skills

Programming Languages: Java, C++, JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks and Libraries: React.js, Node.js, Express.js, Angular, Spring Boot, Bootstrap, Tailwind CSS

Databases: MySQL, PostgreSQL, MongoDB, GraphQL

Tools: Git, GitHub, Postman, Swagger, Eclipse, Visual Studio Code

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, System Design, SOLID Principles, Design Patterns

Cloud and DevOps: Docker, Vercel, Render, Linux

Experience

Google

April 2025 – March 2026

Software Application Developer Apprentice

Bengaluru, Karnataka

- Built a multi-tier sourcing system for Google Search, prioritizing first-party structured knowledge over third-party APIs and strengthening data reliability for **500M+ monthly queries**.
- Designed and shipped a high-throughput Query Result Service (QRS) framework using **C++**, **GraphQL**, and a **microservices architecture**, serving **100+** structured data points for AI-powered Search systems.
- Developed a textualization service enabling AI answers to cite structured knowledge sources, improving answer accuracy by **40%** and satisfying enterprise-grade auditability requirements.
- Applied **Prompt Engineering** to generate diverse query sets for intent-matching evaluation, increasing tool selection rate by **50%** for the Motorcycle feature; expanded unit test coverage by **80%** using **JUnit** across data access and query processing layers.
- Shipped INR-localized PriceBreakDown UI component end-to-end — from UX spec to production — achieving a measured **5%** lift in user engagement; collaborated across **3 cross-functional teams**.

LTI Mindtree

December 2024 – March 2025

Software Engineer

Bhubaneswar, Odisha

- Completed intensive **Java Full-Stack training** and led a **5-member team** in a 10-day Agile sprint to deliver a Pet Care platform, owning **HLD**, **LLD**, **database design**, and SDLC execution across a **8+ entity** relational schema.
- Engineered **30+ Restful APIs** using **Spring Boot**, **Spring Security (JWT, RBAC)**, and **Hibernate/JPA** for **3+ user roles**; managed **50+ Git commits**, API documentation with Swagger, code reviews, and release cycles.

Oasis Infobyte

August 2023 – September 2023

Frontend Developer Intern

Hyderabad, Telangana

- Created **3 frontend applications** following component-based architecture using HTML5, CSS3, and JavaScript, applying modular design patterns, DOM manipulation, and event-driven programming for reusable UI modules.
- Conducted cross-browser and responsive UI testing across **4 major browsers** and multiple device sizes using DevTools and debugging workflows; resolved layout and CSS issues for consistent UX.

Projects

VedaMate – AI-Powered Learning Platform | [GitHub](#) | [Live Demo](#)

November 2025

- Architected an AI-powered learning platform using **React**, **FastAPI**, **LangGraph**, **Gemini**, and **ChromaDB**, generating **10–20 personalized learning modules** per textbook through automated syllabus extraction.
- Implemented a **multi-agent RAG system** integrating vector retrieval, web search, and reasoning workflows, mapping textbook content to AI-generated summaries, quizzes, and flashcards while improving answer relevance by **50%**.

Movie Booking Application | [GitHub](#) | [Live Demo](#)

January 2025

- Deployed a full-stack movie booking app using **Angular, Spring Boot, and MySQL** on Vercel and Render, supporting role-based dashboards with **10+ configurable theatre layouts**.
- Streamlined real-time seat selection, movie/date/theatre-based search, and ticket generation workflows, reducing checkout friction by **35%** through efficient Hibernate/JPA queries and responsive TypeScript UI components.

BlogSpace Application | [GitHub](#) | [Live Demo](#)

May 2024

- Constructed a production-grade **MERN** blogging platform with **JWT authentication, Google OAuth 2.0, RBAC, 15+ REST APIs**, Cloudinary CDN media delivery, and Nodemailer email workflows.
- Improved query performance by **60%** via MongoDB compound text-search indexing and reduced redundant API calls by **70%** using debounced AJAX autocomplete; hardened security with **Zod validation** and **sanitize-html XSS filters**.

Education

Gokaraju Rangaraju Institute of Engineering and Technology
Bachelor of Technology in Electronics and Communication Engineering

September 2020 – August 2024
Hyderabad, Telangana

Certifications

- **NPTEL – Joy of Computing Using Python (IIT Madras)** | [Credential](#)
- **Google RWJ India Search Hackathon Winner (1st Place among 20+ Teams)** | [Credential](#)

Achievements

- Won the Google RWJ India Search internal hackathon, **ranking 1st among 20+ participating teams**, demonstrating strong problem-solving and innovation.
- Solved **800+ DSA problems** across LeetCode and GeeksforGeeks, achieving a **1600+ rating (Top 22%)**.
- Achieved **Elite certification** in NPTEL 'Joy of Computing using Python' from IIT Madras with **88%**, verifying robust programming fundamentals for complex development tasks.
