Professional Summary

Full Stack Software Engineer with **1.5+ years** of production experience at **Google** and **LTI Mindtree** — shipping AI-powered search features to **500M+ monthly users**. Proficient across the full stack — **Java, JavaScript, React, Node.js, Spring Boot** — with a proven track record of delivering measurable impact through backend systems, microservices, and performance optimization across enterprise-scale products.

Skills

Programming Languages: Java, C++, JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks and Libraries: React.js, Node.js, Express.js, Spring Boot, Angular, Bootstrap, Tailwind CSS

Databases: MySQL, PostgreSQL, MongoDB, GraphQL

Tools: Git, GitHub, Postman, Swagger, Eclipse, Visual Studio Code

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, System Design, SOLID Principles, Design Patterns

Cloud and DevOps: Docker, Vercel, Render, Linux

Experience

Google

April 2025 – March 2026

Software Engineer – Apprenticeship

Bengaluru, Karnataka

- Architected a multi-tier sourcing system for **Google Search**, prioritizing first-party structured knowledge over third-party APIs and strengthening data reliability for **500M+ monthly queries**.
- Engineered a high-throughput Query Result Service (QRS) framework using **C++**, **GraphQL**, and a **microservices architecture**, serving **100+** structured data points for AI-powered Search systems.
- Delivered a textualization service enabling AI answers to cite structured knowledge sources, improving answer accuracy by **40%** and satisfying enterprise-grade auditability requirements.
- Independently led **prompt engineering** to generate diverse query sets for intent-matching evaluation, increasing tool selection rate by **50%** for the Motorcycle feature; expanded unit test coverage by **80%** using **JUnit** across data access and query processing layers.
- Launched an INR-localized PriceBreakDown UI component end-to-end — from **UX spec to production** — achieving a measured **5%** lift in user engagement; collaborated across **3 cross-functional teams**.

LTI Mindtree

December 2024 – March 2025

Software Engineer

Bhubaneswar, Odisha

- Led a 5-member team through a **30-day Agile sprint** to deliver a full-stack Pet Care platform, owning **HLD, LLD, database design**, and end-to-end SDLC execution across an **8+ entity** relational schema.
- Implemented **30+ RESTful APIs** using **Spring Boot**, **Spring Security (JWT, RBAC)**, and Hibernate/JPA for **3+** user roles; maintained **50+** Git commits with Swagger **API documentation**, **code reviews**, and release cycles.

Oasis Infobyte

August 2023 – September 2023

Frontend Developer Intern

Hyderabad, Telangana

- Developed **3 frontend applications** using **HTML5**, **CSS3**, and **JavaScript** with component-based architecture, modular design patterns, DOM manipulation, and **event-driven programming** for reusable UI modules.
- Executed cross-browser and responsive **UI testing across 4 major browsers** and multiple device sizes using **DevTools**; diagnosed and resolved layout and CSS inconsistencies to ensure uniform UX across all viewports.

Projects

VedaMate – AI-Powered Learning Platform | [GitHub](#) | [Live Demo](#)

November 2025

- Spearheaded development of an AI-powered learning platform using **React**, **FastAPI**, **LangGraph**, **Gemini**, and **ChromaDB**, generating **10–20** personalized learning modules per textbook through automated syllabus extraction.
- Designed a **multi-agent RAG** system integrating vector retrieval, web search, and reasoning workflows, mapping textbook content to AI-generated summaries, quizzes, and flashcards while improving answer relevance by **50%**.

Movie Booking Application | [GitHub](#) | [Live Demo](#)

January 2025

- Shipped a full-stack movie booking application using **Angular, Spring Boot, and MySQL** on Vercel and Render, supporting role-based dashboards with **10+** configurable theatre layouts.
- Optimized real-time seat selection, multi-filter search, and ticket generation workflows, reducing checkout friction by **35%** through efficient **Hibernate/JPA** queries and responsive **TypeScript** UI components.

BlogSpace Application | [GitHub](#) | [Live Demo](#)

May 2024

- Built a production-grade MERN blogging platform with **JWT authentication, Google OAuth 2.0, RBAC, 15+ REST APIs**, Cloudinary CDN media delivery, and Nodemailer email workflows.
- Boosted query performance by **60%** via **MongoDB** compound text-search indexing and cut redundant API calls by **70%** using debounced **AJAX** autocomplete; hardened security with Zod validation and sanitize-html XSS filters.

Education

Gokaraju Rangaraju Institute of Engineering and Technology
Bachelor of Technology in Electronics and Communication Engineering

September 2020 – August 2024
Hyderabad, Telangana

Certifications

- NPTEL – Joy of Computing Using Python (IIT Madras) | [Credential](#)
- Google RWJ India Search Hackathon Winner (1st Place among 20+ Teams) | [Credential](#)

Achievements

- Won the Google RWJ India Search internal hackathon, **ranking 1st among 20+ participating teams** by delivering a high-accuracy search feature that outperformed all competing solutions.
- Solved **800+ DSA problems** across LeetCode and GeeksforGeeks, achieving a **1600+ rating (Top 22%)**.
- Achieved **Elite certification** in NPTEL 'Joy of Computing using Python' from IIT Madras with **88%**, demonstrating strong command of Python and core computing principles.
